CITY OF
LEWISVILLE
Deep Roots. Broad Wings. Bright Future.

To Whom It May Concern:

I have had the privilege of working with Resinating LLC as they installed their fiberglass liners in two manholes and a thirty-inch sanitary sewer main line for the City of Lewisville, Texas.

Lewisville had a thirty-inch sanitary sewer main line collapse between two manholes and an emergency was declared. In an environment where contractors are difficult to locate and have respond in a timely manner, Resinating LLC responded on the day they were called. Their crews were courteous, safe and knowledgeable.

As for the Resinating Liners, once installed, the manholes and main line looked like a new installation. When we installed other products, once they'd been installed, they still had infiltration. Infiltration is, of course, a huge contributor to the overall wastewater treatment process and has a huge monetary impact on our system.

A post installation CCTV inspection of the Resinating Liners showed no infiltration in the line. I recommend Resinating Liners for all manhole and main line replacement/rehabilitation projects. Resinating LLC was able to fulfill all my expectations as a consumer and more.

Sincerely,

James Wallingsford Date: 9-29-2020
